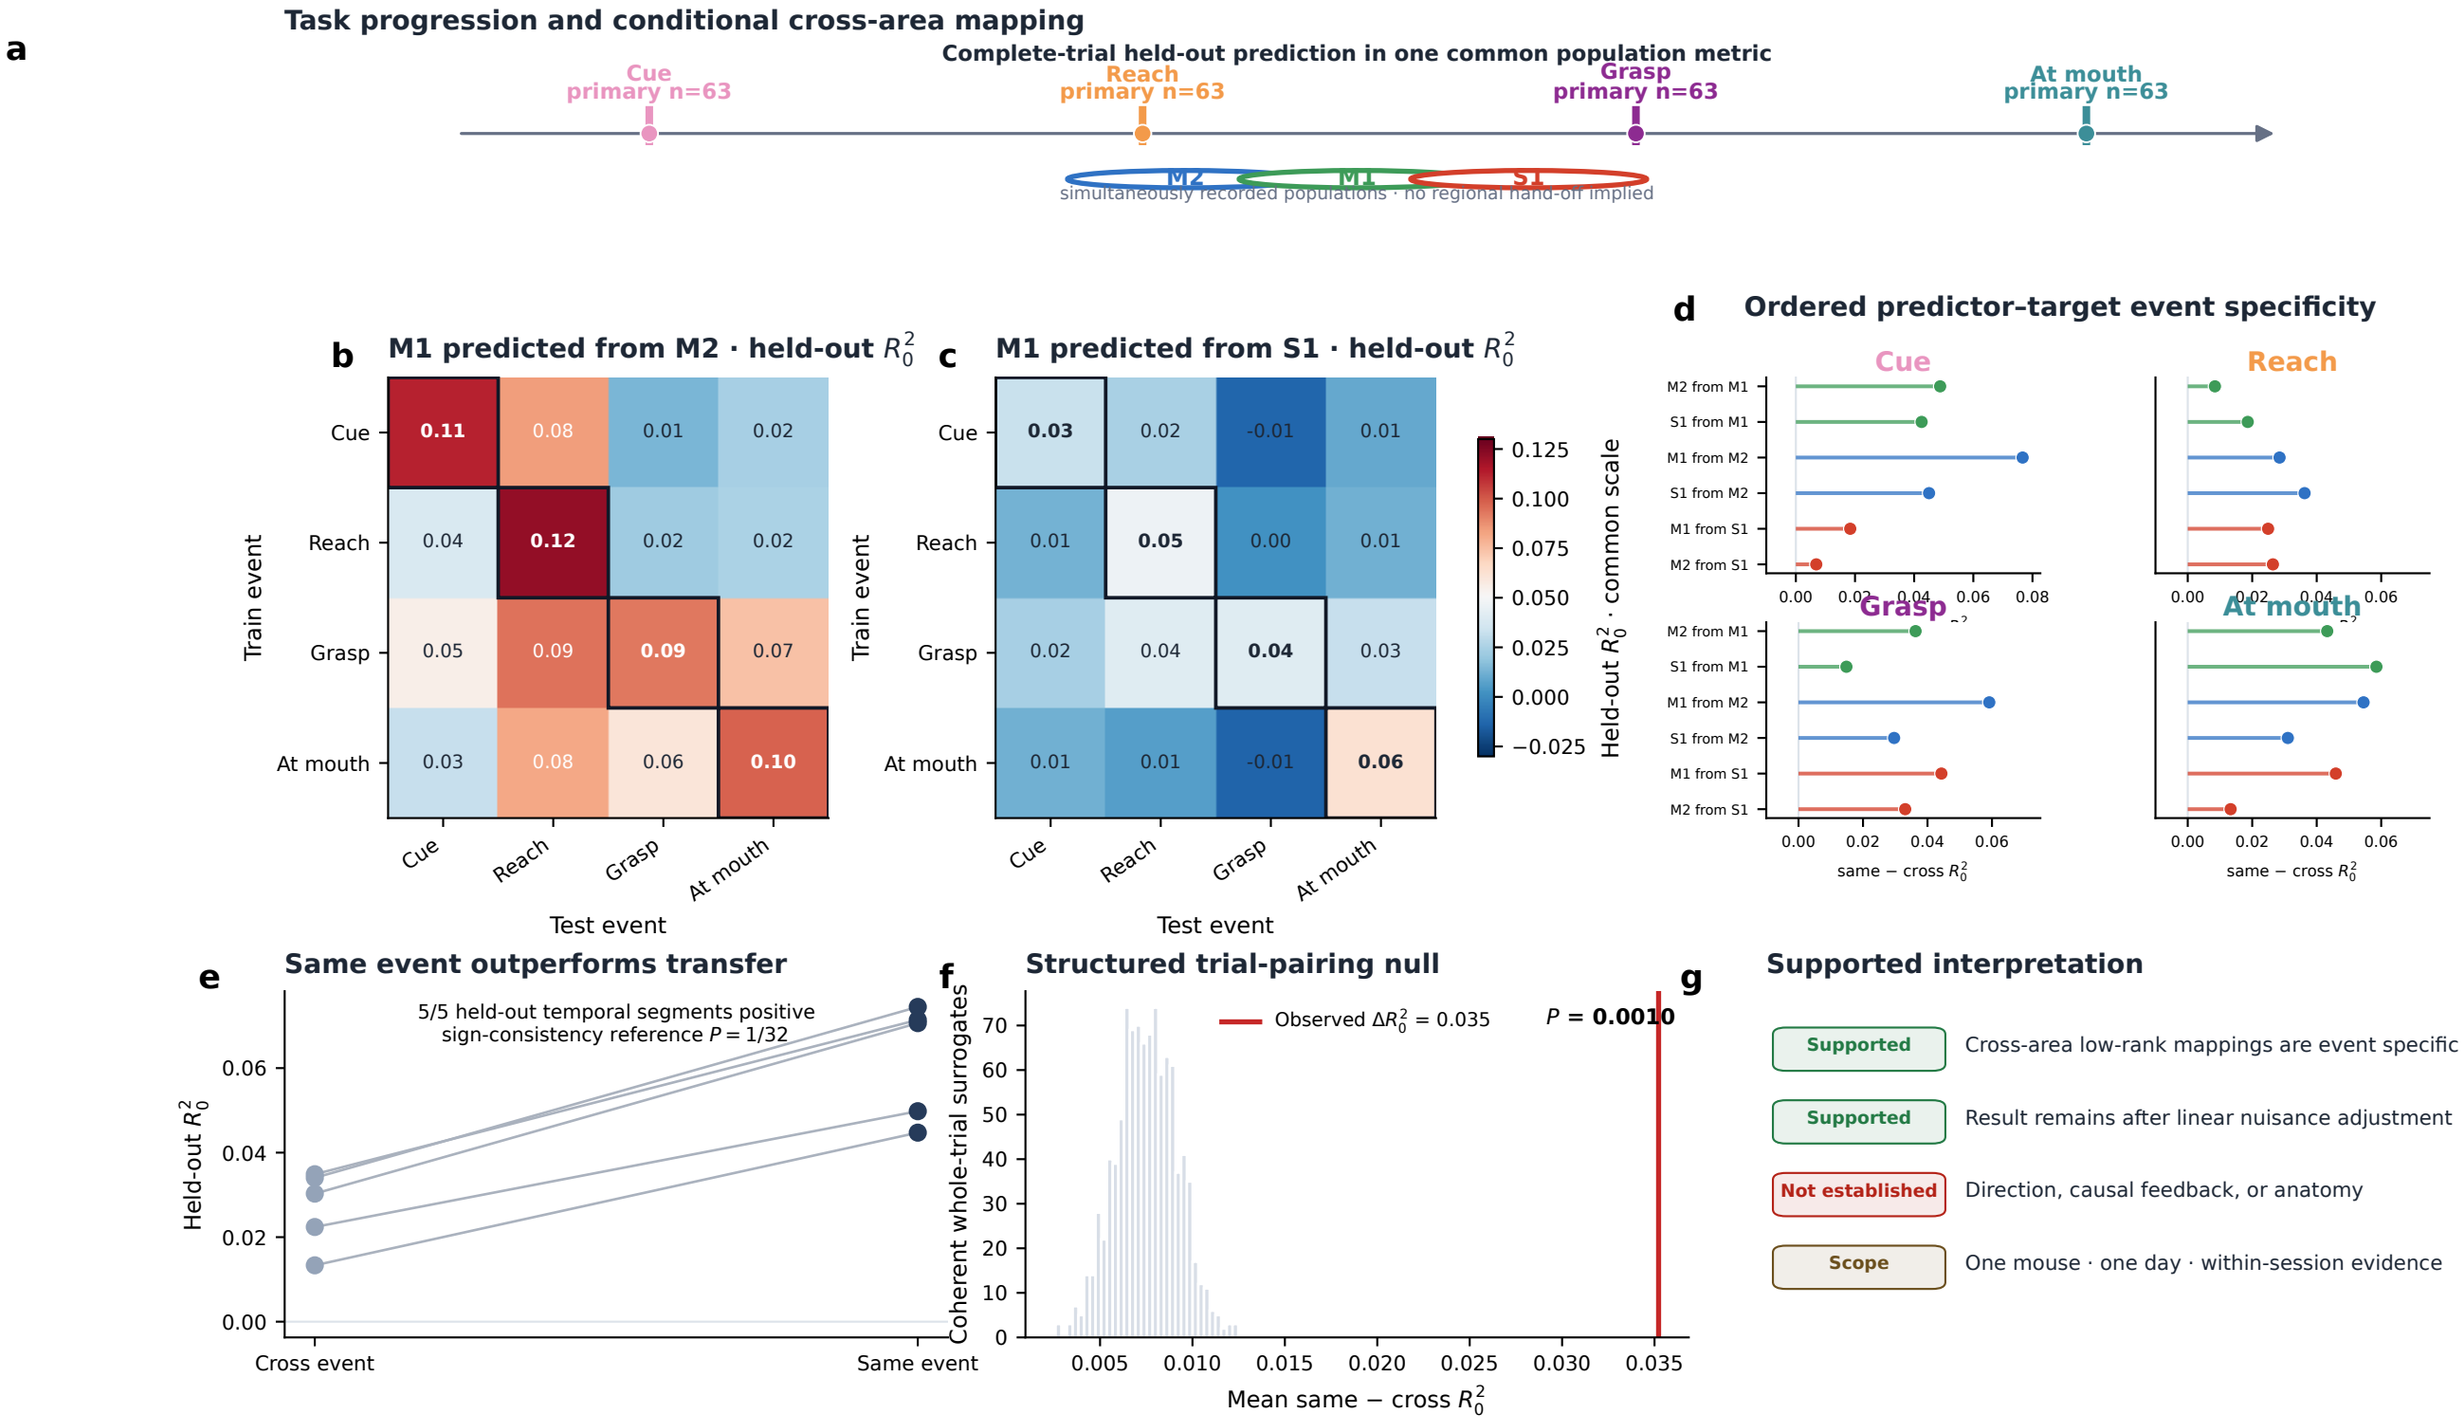
Figure 4 | Cross-area population mappings show movement-event–specific predictability within one recording session



Primary common-event set: n=63 trials (raw valid event annotations: cue/reach/grasp n=77; at-mouth n=63) · 705 supplied project-QC units · 80 Hz · one mouse/day · five chronological held-out segments · rank-3 RRR · 1,000 coherent within-block whole-trial surrogates
