RETRAINED REGIONAL LFADS · seed 760 · M1/M2/S1 · 38 factors each

Figure 6e | Paw-velocity profiles reconstructed from regional population trajectories

All 48 held-out trial paths are displayed; colors are matched to Figure 6d and line transparency reveals the density of repeated trajectories.

Velocity is the numerical derivative of the cleaned three-coordinate paw trajectory. Displayed x-velocity is one coordinate; formal metrics use all three coordinates.
