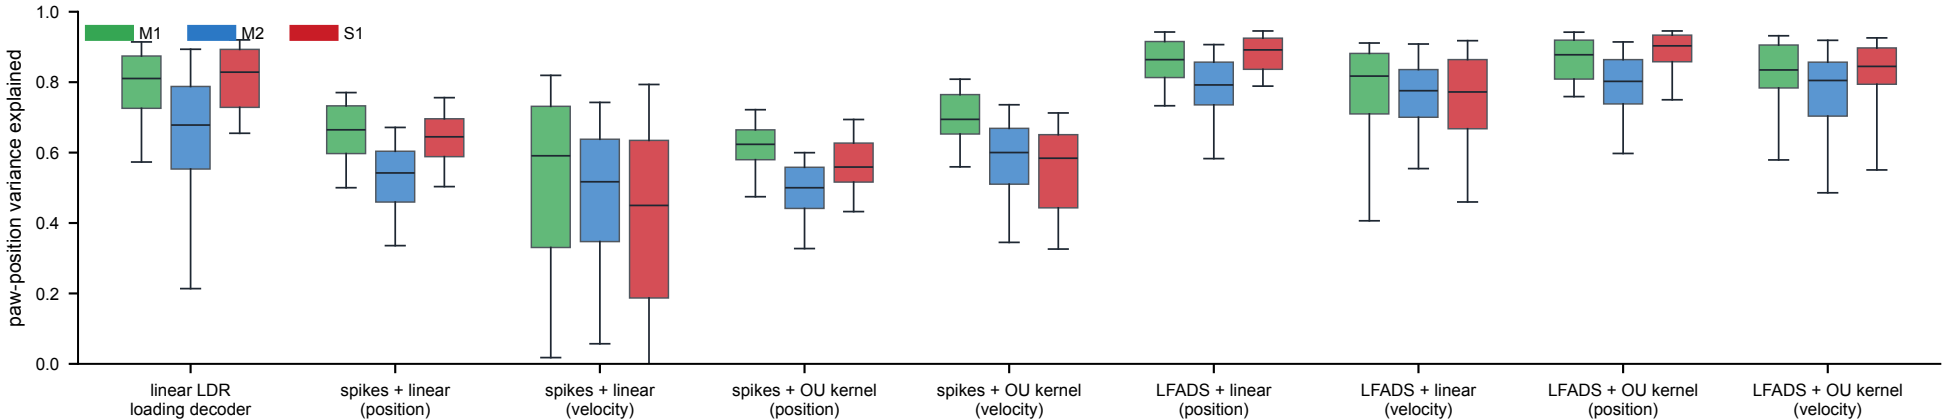
RETRAINED REGIONAL LFADS · seed 760 · M1/M2/S1 · 38 factors each

Figure 6f | LDR decoding benchmark against raw-spike and LFADS controls

The nine-method layout mirrors the source figure; GPFA controls are replaced by independently retrained M1, M2 and S1 LFADS factors.

f



Boxes are 48 trial-wise values (5th-95th percentile whiskers). Pairwise two-sided Wilcoxon tests compare LDR with each control within region; Holm-adjusted values are stored in the source metrics. Trials are not animals.
