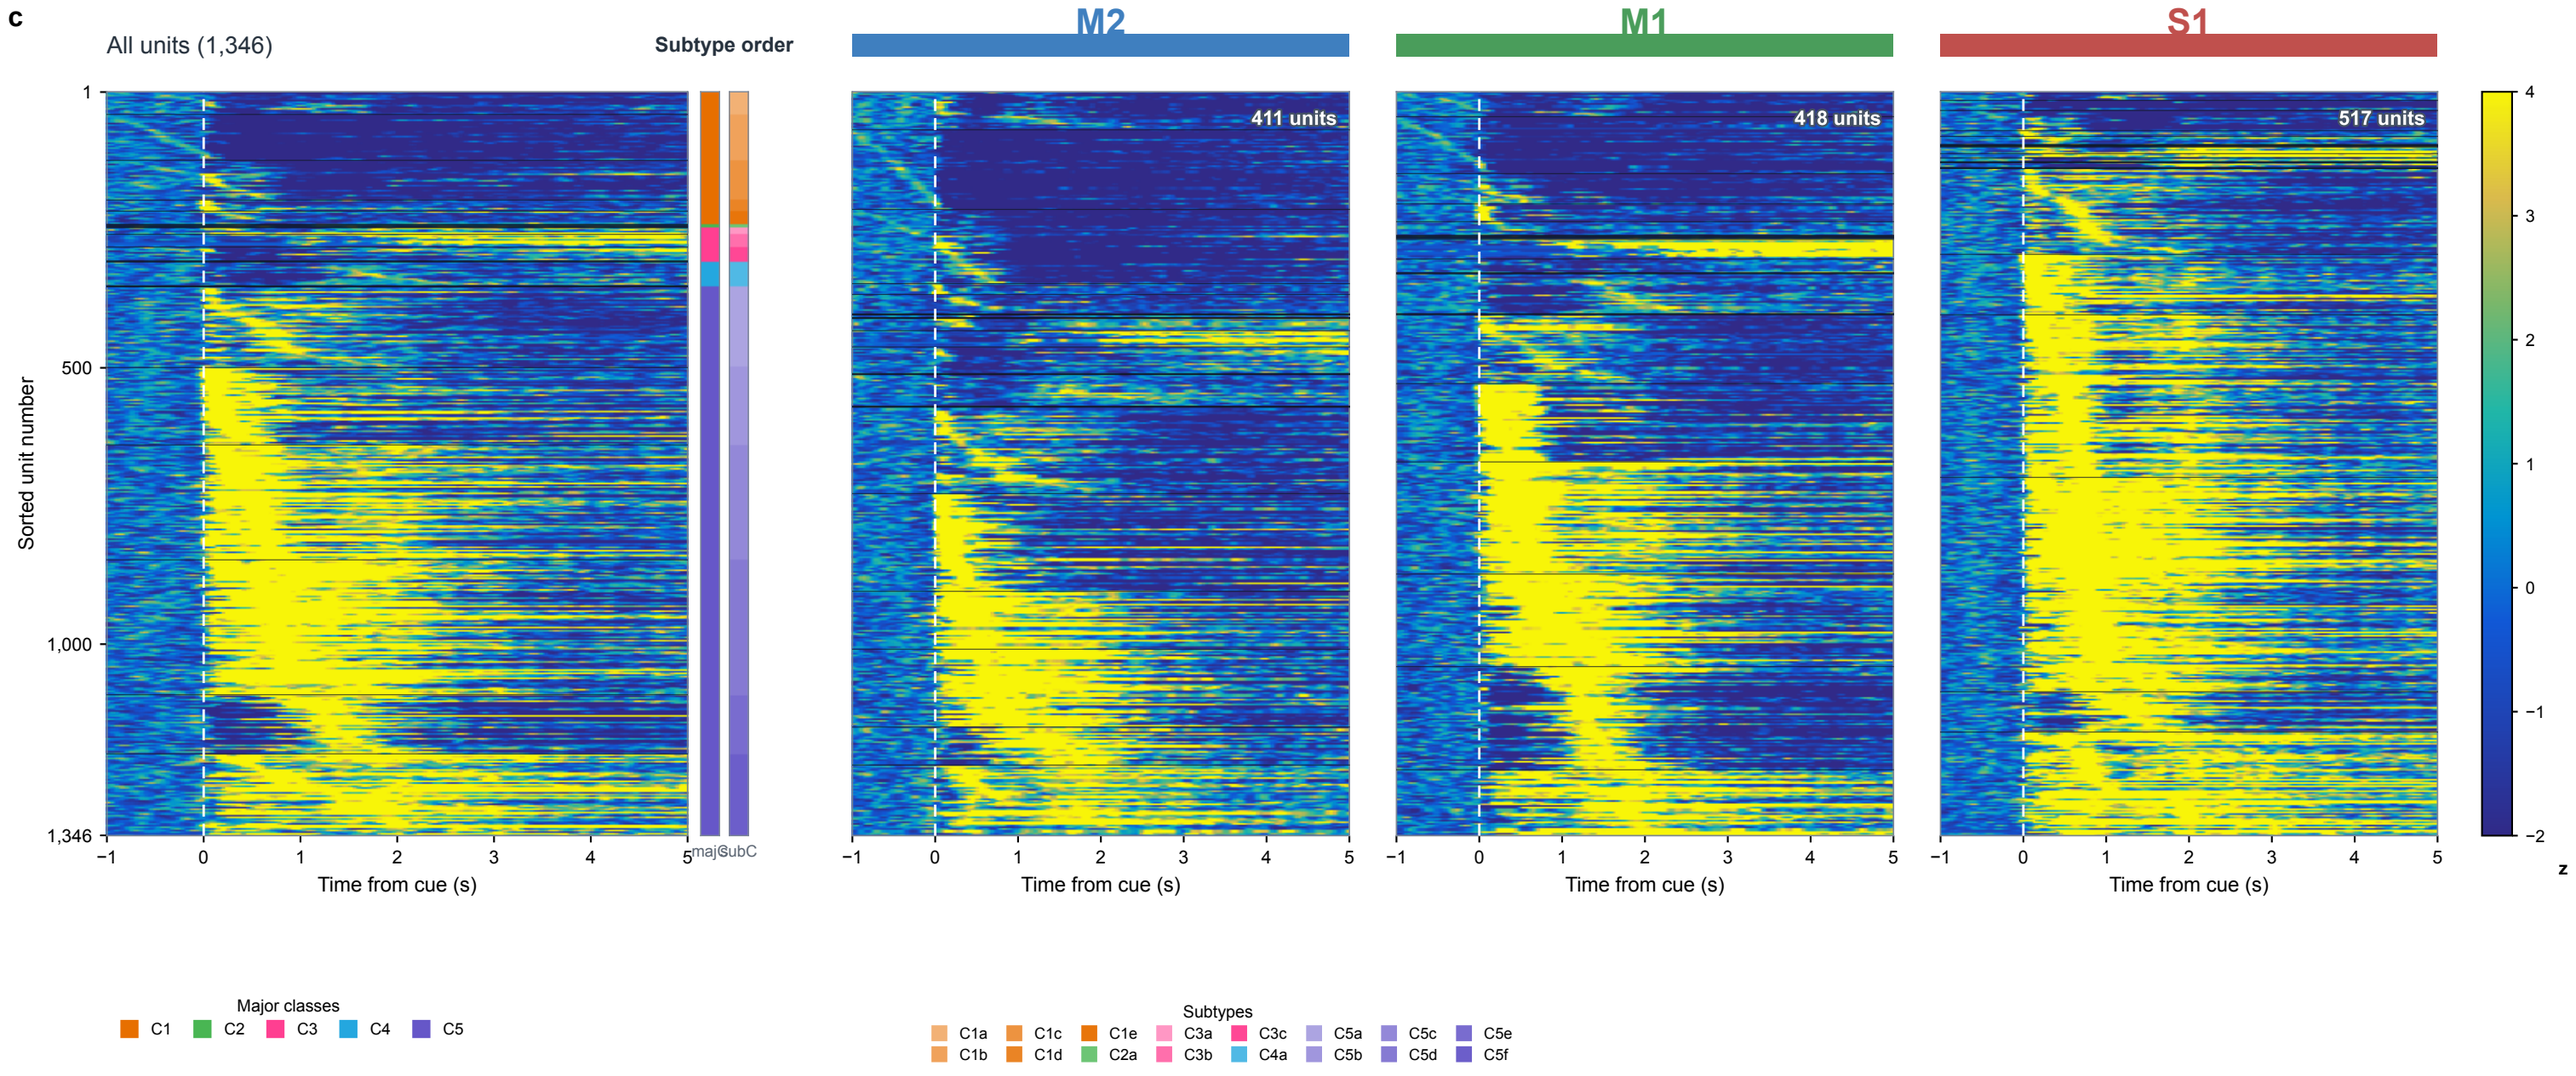

Figure 4c | Subtype-sorted z-score firing-rate heatmap

Rows are single units ordered by major class, subtype and peak z-score time; color scale is −2 to +4 z.

Firing rates are smoothed and z-scored to each unit's −5-to-0-s baseline, then displayed from −1 to +5 s. The All panel includes major-class and subtype annotation strips, and horizontal rules mark every subtype boundary; M2, M1 and S1 retain the same subtype/peak-time sorting rule. The dashed white line marks cue onset. Regional panels are descriptive subsets of the same 1,346 units, not independent replicates.
