Extended Data Figure 7b | Full-trial similarity graph, graph summaries and anatomical positions

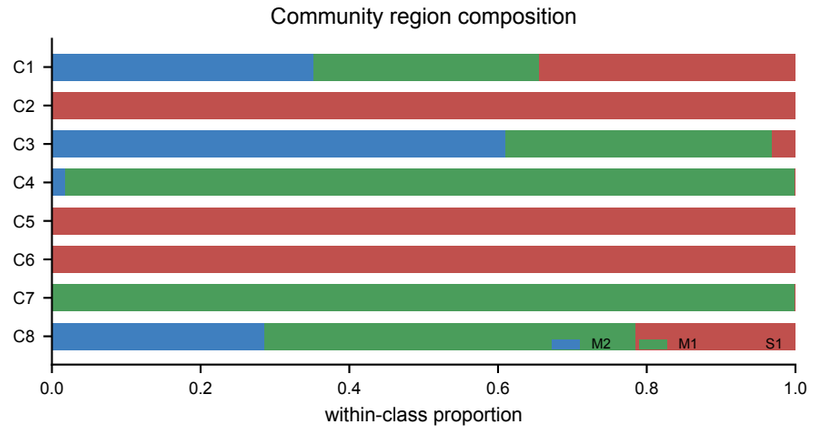

The final three Functional hierarchy sections are preserved with identical node membership and coordinates.

Top weighted hubs and cross-region bridges

rank	hub	area	degree	bridge	area	cross-region
1	u0828	S1	65.76	u0171	M1	38.98
2	u0171	M1	59.06	u0383	M1	37.45
3	u1200	S1	56.19	u0495	M1	30.68
4	u0383	M1	54.85	u0828	S1	29.73
5	u0495	M1	49.52	u0175	M1	22.24
6	u0175	M1	34.35	u1206	S1	19.01
7	u1206	S1	33.32	u1200	S1	16.88
8	u0472	S1	20.20	u0472	S1	11.04

i

G, each cluster connects to its ten strongest positive Pearson neighbours in the smoothed, within-trial z-scored full-trial matrix; eight communities are the consensus of 100 weighted label-propagation runs. The force layout is display geometry only. H, region composition, the unique undirected cross-region edge budget, weighted-degree hubs and cross-region bridge scores are recomputed from the same graph. I, supplied CW90 electrode coordinates are recolored by community and region. Functional similarity is neither anatomical connectivity nor causal coupling.
