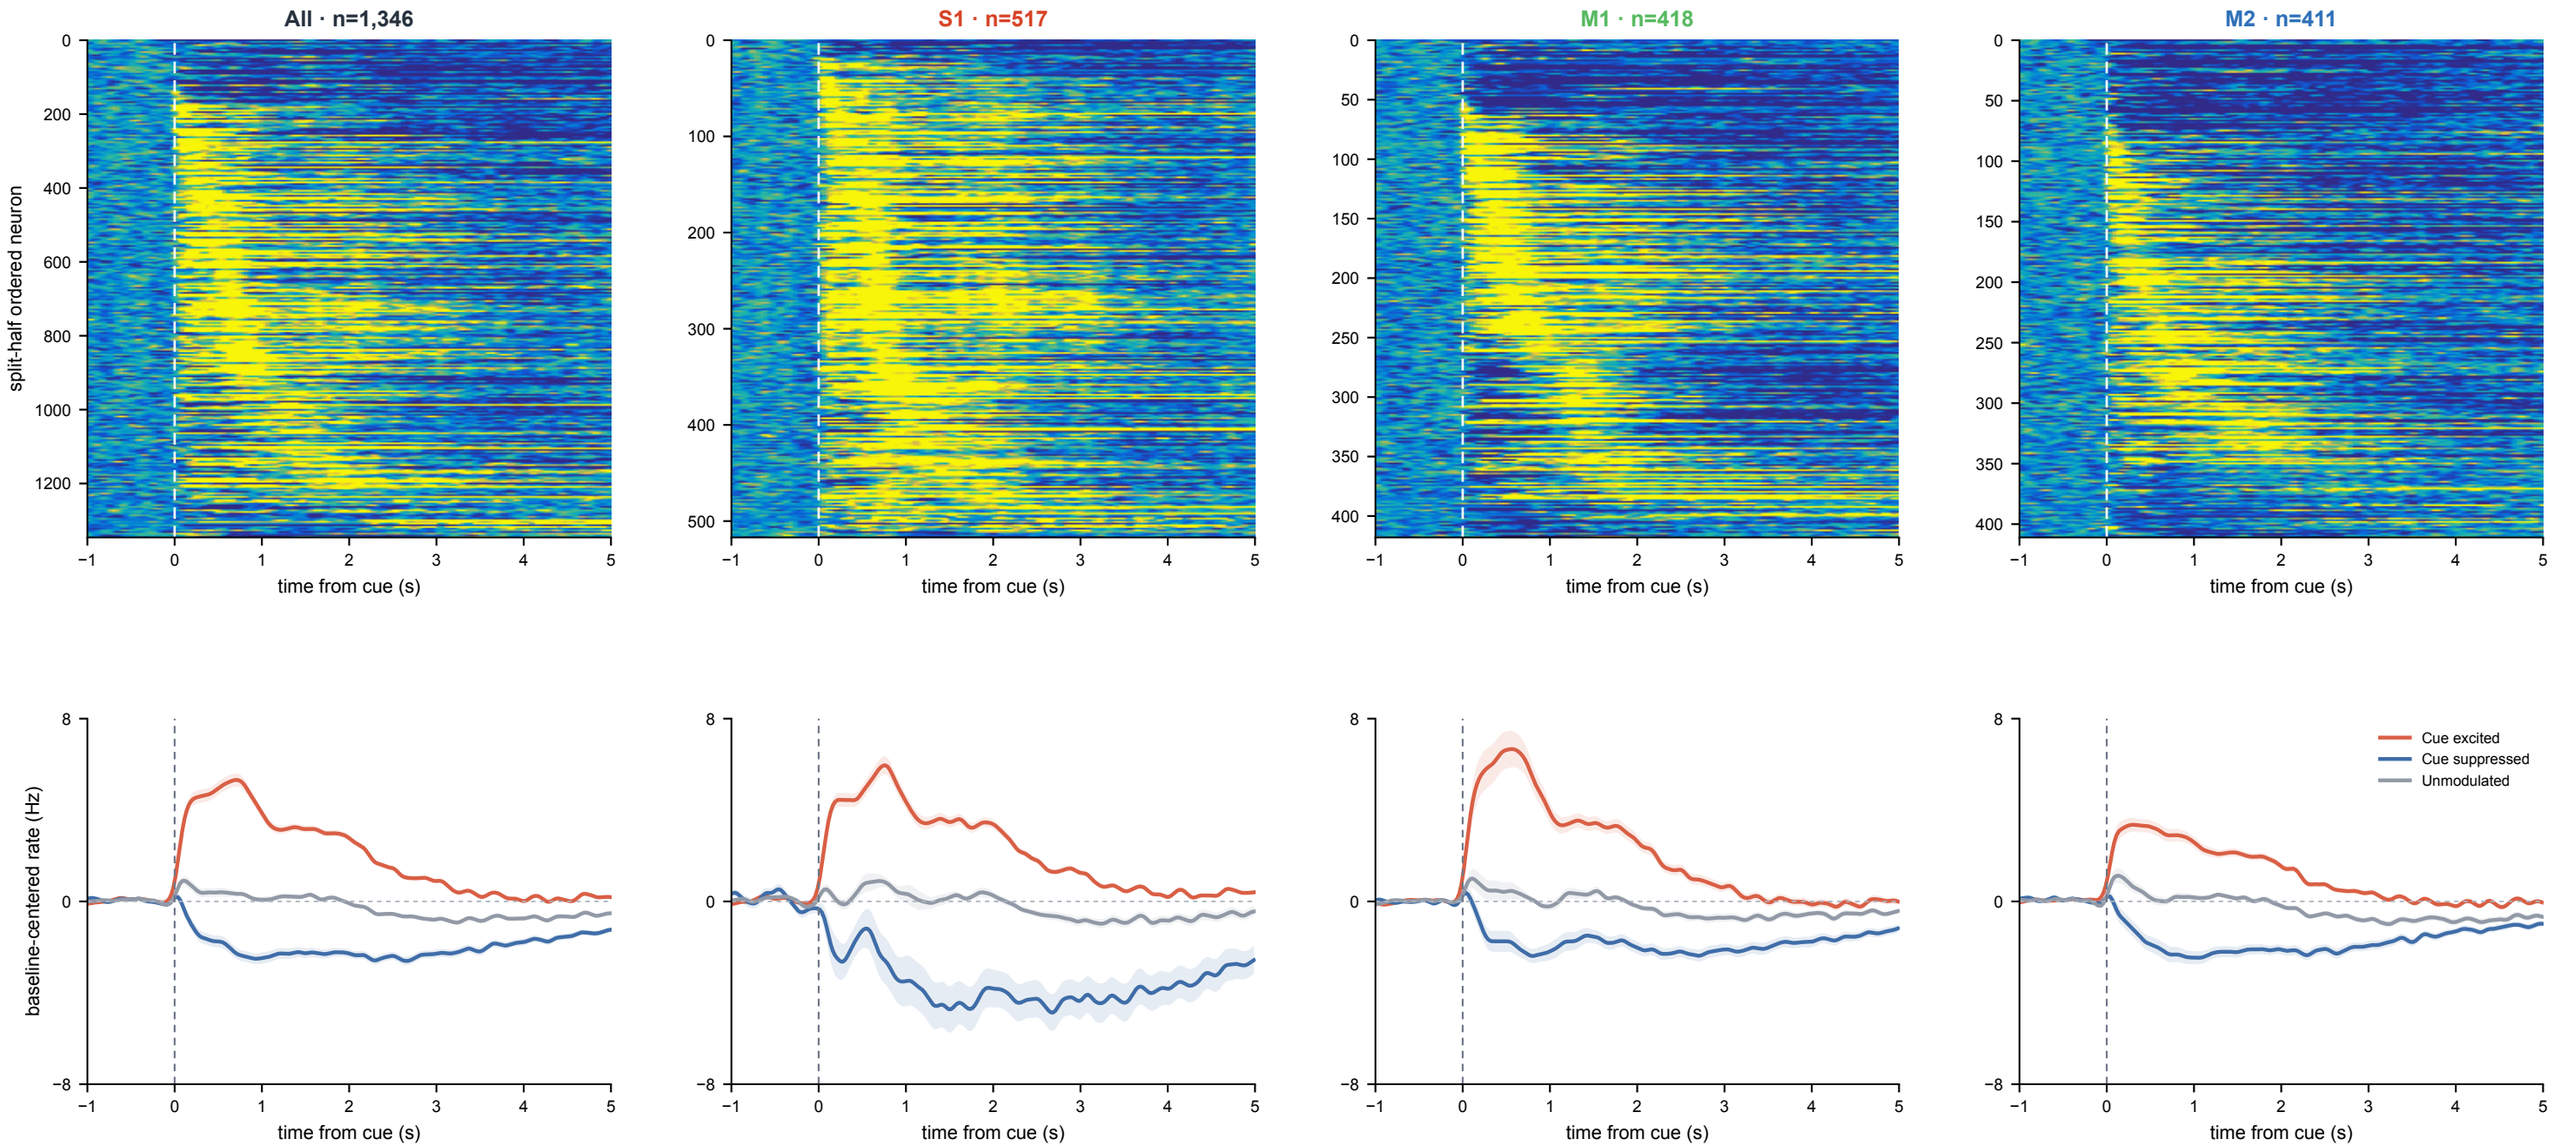

Figure 2a | Cue-aligned population timing and updated response classes

Odd trials determine neuron order; held-out even trials are shown from −1 to +5 s. Functional classes are recomputed with paired 80-trial tests and BH-FDR across all 1,346 neurons.

a

Heatmaps use each neuron's −5-to-0-s baseline z-score (display −2 to +4 z). Curves are class mean ± neuron SEM. Figure 2a is descriptive; waveform-class enrichment and all significance annotations are confined to Figure 2b.
